Part 2 - Marketable Securities

Section 2.1 - Treasury Bills

General Characteristics

The following general characteristics apply to Government of Canada treasury bills:

· As of September 18, 1997, treasury bills are issued every two weeks.
· Primary distributors submit treasury bill tenders electronically to the Bank of Canada.
· Treasury bills are generally issued with a term to maturity of 98 days, 168 or 182 days and 350 or 364 days. For cash management reasons, treasury bills may also be issued (usually with a term to maturity of less than 91 days).
· Treasury bills are priced at a discount. The return is the difference between the purchase price and the par value. The rate of return (yield) is conventionally calculated by dividing this difference by the purchase price and expressing the result as an annual percentage rate, using a 365-day year. The rate of return is computed as follows:

\[
    \text{yield} = \frac{\text{par value} - \text{purchase price}}{\text{purchase price}} \times \frac{365 \times 100}{\text{term}}
\]

· Effective November 1995, all new issues of treasury bills are issued in global form only.
· A global certificate for the full amount of the treasury bills offered is issued in fully registered form in the name of "CDS & Co.", a nominee of the Canadian Depository for Securities Limited (CDS).
· Principal is paid in lawful money of Canada to CDS & Co.
· Treasury bills must be purchased, transferred or sold directly or indirectly through a participant of the Debt Clearing/Money Market System (DCS) operated by CDS.

Note: The purchase price of the bond includes inflation compensation and accrued interest. Inflation compensation accrues from the original issue date of December 10, 1991. Interest accrues from the last interest payment date.

Interest and Final Payment:
The bonds bear interest adjusted in relation to the Consumer Price Index for Canada. Interest consists of both an inflation compensation component ("Inflation Compensation") calculated based on Principal and payable at maturity and a cash entitlement ("Coupon Interest") calculated based on Principal and accrued...
Inflation Compensation. Coupon Interest is payable in semi-annual instalments on June 1 and December 1 (the "Coupon Payment Dates") commencing June 1, 1992. Coupon Interest is calculated by multiplying one-half of the coupon of 4.25% per annum by the sum of the Principal and the Inflation Compensation accrued from the date the first Bond was issued, namely December 10, 1991 (the "Original Issue Date") to the relevant Coupon Payment Date. At maturity, in addition to Coupon Interest payable on such date, a final payment (the "Final Payment") equal to the sum of Principal plus Inflation Compensation accrued from the Original Issue Date to maturity will be made.

**Indexing Process:** An index ratio (the "Index Ratio") is applied to calculate both Coupon Interest and Inflation Compensation. The index Ratio for any date ("Date") is defined as the ratio of the reference CPI applicable to such Date ("Ref CPI_{Date}") divided by the reference CPI applicable to the Original Issue Date ("Ref CPI_{Base}"). The reference CPI for the first day of any calendar month is the CPI for the third preceding calendar month. For example, the reference CPI for January 1, 1996 is the CPI for October 1995. The reference CPI for any other day in a month is calculated by linear interpolation between the reference CPI applicable to the first day of the month in which the day falls and the reference CPI applicable to the first day of the month immediately following.

**Calculation of Interest:** Inflation Compensation accrued to any Date is calculated by first multiplying the Principal by the Index Ratio applicable to that Date ("Index Ratio_{Date}") and then subtracting the Principal.

Coupon Interest is calculated by multiplying one-half of the coupon of 4.25% per annum by the sum of the Principal and the Inflation Compensation accrued from the Original Issue Date to the relevant Coupon Payment Date.
