

The National Retailer Research Program

Results for 2011 Q2

In April and May 2011, a total of 1,064 anonymous purchases were made at retailers across Canada. *Canadian Journey* series \$100 and \$20 notes (532 of each) were used for the purchases.

Acceptance of notes

All of the \$20 bank notes were accepted. When locations that could not make change for a \$100 bank note are excluded, the acceptance rate was 95 per cent.

Acceptance of *Canadian Journey* series notes

Signage

The 3 per cent of businesses displaying signs indicating their refusal to accept certain denominations remained within the range of 2 to 4 per cent observed since 2003. Chain store locations were four times more likely to have non-acceptance signage in the current study than were independent locations.

Percentage of businesses displaying signs indicating their refusal to accept certain denominations

Examination of security features

Cash handlers were more likely to examine the \$100 bank note (63 per cent) than the \$20 bank note (47 per cent).

Frequency of counterfeiting

Twenty-three per cent of the businesses asked stated that counterfeit bank notes are a "problem," while 30 per cent indicated that they had received a counterfeit note in the past.
