Agent-Based Computational Models

Peter Howitt Brown University

Bank of Canada workshop November 17, 2016

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

Computational models of many interacting, heterogeneous agents, each endowed with simple behavioral rules permitting action in unknown complex environments, with no direct restrictions on aggregate outcomes.

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへ⊙

Computational models of many interacting, heterogeneous agents, each endowed with simple behavioral rules permitting action in unknown complex environments, with no direct restrictions on aggregate outcomes.

Examples in economics:

 \rightarrow Schelling's segregation model (1969)

Computational models of many interacting, heterogeneous agents, each endowed with simple behavioral rules permitting action in unknown complex environments, with no direct restrictions on aggregate outcomes.

- \rightarrow Schelling's segregation model (1969)
- \rightarrow Santa Fe Stock Market (1994)

Computational models of many interacting, heterogeneous agents, each endowed with simple behavioral rules permitting action in unknown complex environments, with no direct restrictions on aggregate outcomes.

- \rightarrow Schelling's segregation model (1969)
- \rightarrow Santa Fe Stock Market (1994)
- \rightarrow Geanakoplos et al. (AER 2012)

Computational models of many interacting, heterogeneous agents, each endowed with simple behavioral rules permitting action in unknown complex environments, with no direct restrictions on aggregate outcomes.

- \rightarrow Schelling's segregation model (1969)
- \rightarrow Santa Fe Stock Market (1994)
- \rightarrow Geanakoplos et al. (AER 2012)
- \rightarrow The EURACE project

Why in macroeconomics?

Autonomy and spontaneous order

1. Costs of inflation

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

- 1. Costs of inflation
- 2. Systemic breakdown

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

- 1. Costs of inflation
- 2. Systemic breakdown
- 3. Big data

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

- 1. Costs of inflation
- 2. Systemic breakdown
- 3. Big data
- 4. Heterogeneity

Two methodological issues with ABMs

1. Can we retain discipline without imposing rationality and equilibrium?

(ロ)、(型)、(E)、(E)、 E) の(の)

Two methodological issues with ABMs

1. Can we retain discipline without imposing rationality and equilibrium?

(ロ)、(型)、(E)、(E)、 E) の(の)

2. What about the Lucas critique?

Conclusions

1. Central banks are well equipped for creating ABMs

・ロト < 団ト < 三ト < 三ト ・ 三 ・ のへの

Conclusions

1. Central banks are well equipped for creating ABMs

・ロト < 団ト < 三ト < 三ト ・ 三 ・ のへの

2. A central bank needs more than one model
