A-2020-00015	Any internal communication sent or received by the Governing Council and the Monetary Policy Review Committee as well as the leadership team in Canadian Economic Analysis (CEA) department pertaining to how to monitor, analyze and forecast inflation during the COVID-19 pandemic. Any internal communication pertaining to: 1) the reliability or accuracy of Statistics Canada's total CPI as a measure of changes in Canadians' cost of living since the COVID-19 pandemic began to have a significant impact on consumer spending behaviour in Canada; 2) opinions of the Bank's employees about whether the total CPI, which uses fixed weights from 2017, remains the most relevant measure of the cost of living for most Canadians when there are significant changes in Canadians' consumption habits; 3) the merits of using inflation indicators other than Statistics Canada's total CPI during the COVID-19 pandemic.
